DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10 and 16-20, drawn to processing an input signal of a hearing aid, classified in class 381, subclasses 312, 316.
- II. Claims 21-27, 28-43, 45-49, drawn to gain control specifically, classified in class 381, subclasses 104-109, 56, 58.
- III. Claims 50-59, drawn to gain control within an amplifier, classified in class 381, subclass 120, 104-109, and class 330.
- IV. Claims 11-15, drawn to an apparatus for processing a digital audio signal, classified in class 381, subclasses 120, 56-58.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-IV are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because Invention II may be used in any type of audio processing device and methodology for gain control; Invention IV may be used in any type of audio related apparatus that processes or monitors a digital audio signal; Invention III is specifically for controlling gain

of an amplifier. The subcombination has separate utility such as processing an input signal specifically for a hearing aid.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
